

# ProView 7000 Application Note

## Upgrading to 2.4 for IP Input feature

This document is intended to facilitate the upgrade from Release 2.3 to Release 2.4 for the purpose of enabling the IP Input feature. If this feature is not needed, there is no need to follow this procedure.

- 1) Connect to the unit via EMS. (can be installed/launched from the web interface of the PVR7K)
- 2) Click the upgrade button, select the desired device(s) and the 2.4 zip file, downloaded from the FTP site\*.
- 3) Start the upgrade process.
- 4) After the PVR7K completes the upgrade, repeat step 3. This is required since new SW elements were added to the PVR7K to support the IP Input feature.
- 5) After the 2<sup>nd</sup> upgrade is complete, check that you have IP Input license. You can confirm that by right-click on the device→properties→ license tab.
- 6) If the license is missing, put the correct one in the designated box below.
- 7) After the correct license is in place, go to tools menu→GbE Mode and select "in".
- 8) Once this procedure is done, you will see the IP Input ports and sockets.
